

Clinical Study HN-204 — Safety Summary

Study Overview

Randomized controlled study. Product AX-17 versus control. The adverse-event table is the primary evidence used in this exercise.

Table 7 — Treatment-Emergent Adverse Events

Table values are percentages of participants reporting at least one event.

Adverse Event	AX-17	Control
Nausea	12.4%	8.1%
Dizziness	7.2%	5.9%
Serious event*	2.1%	1.8%

Figure 4 — Events by Age Group

The figure caption reports that events were more frequent in participants aged 65+ in both arms; the difference between arms was not considered clinically decisive in this synthetic study.

Footnote

* Serious events only. Percentages in Table 7 are synthetic training data.
